*A group of Italy's leading scientists has issued an alarming warning of the devastating long-term health risks faced by those who received Covid mRNA "vaccines."*

The experimental medicine researchers found that people who received the injections face persistent neurological symptoms.

In a new study, they reveal that mRNA "vaccines" trigger abnormal immune responses, which lead to long-term brain damage.

The study was led by **Drs. Alireza Hajabbas Farshchi, Andrea De Maria, and Simona Sivori.**

The renowned Italian medical experts conducted the study at the Università degli Studi di Genova's Department of Experimental Medicine.

The results of the peer-reviewed study were [published](#) in the UNITesi medical journal.

## Analysis of clinical presentations, adaptive and innate immune correlates of Vaccine-associated Post-Acute SARS-Coronavirus Syndrome (PASC-vac)

[HAJABBAS FARSHCHI, ALIREZA](#)

2025

### Abstract

Post-vaccination acute sequelae of SARS-CoV-2 (PASC-vac) is a condition characterized by persistent neurological and immunological symptoms following COVID-19 vaccination. This study explores the clinical manifestations, immune correlates, and potential pathogenic mechanisms underlying PASC-vac. A cohort of 71 PASC-vac patients and 19 healthy donors was analyzed through immunological assessments, including flow cytometry, serum antibody profiling, and tissue examination. The findings indicate that PASC-vac patients frequently experience peripheral neurological symptoms such as paresthesia, dysautonomia, and vasomotor disturbances. Additionally, elevated levels of anti-idiotypic antibodies and disruptions in peripheral lymphocyte subsets were detected. Analysis of inflammatory precursor cells (CD34+ DNAM-1bright CXCR4+) suggests their involvement in immune dysregulation associated with PASC-vac. The study also investigates the connection between PASC-vac and small fiber neuropathy (SFN), demonstrating reduced nerve fiber density in affected individuals. These results highlight the role of abnormal immune responses, autoantibody production, and immune dysregulation in the development of PASC-vac. Furthermore, therapeutic strategies targeting NRP1 and ACE2 receptors are proposed as potential avenues for treatment.

The team sought to explore immune mechanisms underlying persistent post-vaccination symptoms following surging reports of brain damage among the mRNA-vaccinated.

The study investigates Post-Acute Sequelae of SARS-CoV-2 Vaccination (PASC-vac).

The scientists hypothesized that persistent neurological symptoms following Covid mRNA “vaccination” are linked to abnormal immune responses.

These immune responses include autoantibody generation and innate immune dysregulation.

This observational study analyzed 71 patients diagnosed with PASC-vac alongside 19 healthy controls.

Subjects underwent detailed immunological profiling, including flow cytometry of lymphocyte populations, serum antibody characterization, and tissue analysis for nerve fiber density.

Special attention was paid to levels of anti-idiotypic antibodies and the role of inflammatory precursor cells (CD34+ DNAM-1<sup>bright</sup> CXCR4+), believed to be involved in post-vaccination immune disruption.

The PASC-vac cohort commonly exhibited peripheral neurological symptoms, such as paresthesia, dysautonomia, and vasomotor disturbances.

The scientists found that the “vaccinated” cohort suffered persistent neurological symptoms and also faced the risk of long-term damage.

Immunological analysis revealed elevated anti-idiotypic antibody levels and significant disruption in peripheral lymphocyte populations compared to controls.

Evidence also indicated expansion of inflammatory precursor cells linked to chronic immune activation.

Skin biopsies confirmed reduced small nerve fiber density, supporting a link to small fiber neuropathy (SFN).

These observations suggest that PASC-vac may be driven by maladaptive humoral and innate immune responses following Covid mRNA “vaccination.”

The findings imply that “vaccines” have caused widespread harm and created long-term risks for those who received the injections, including those who may not have developed symptoms yet.

The study adds to growing concern over deadly “post-vaccine syndromes.”

As Slay News previously [reported](#), leading scientists from the world-renowned Yale University recently came to similar conclusions following a landmark study.

The Yale University School of Medicine study confirmed that Covid mRNA “vaccines” cause vaccine-acquired immunodeficiency syndrome (VAIDS).

The study found that mRNA injections alter human biology to create long-term spike protein

production that increases over time.

The scientists warn that the Covid mRNA vaccines alter T cell immunophenotypes, which triggers VAIDS - or “vaccine-induced AIDS.”

Like the Italian study, the Yale researchers also determined that the injections cause long-term “post-vaccine syndromes.”

Two of the study’s co-senior authors, **Harlan Krumholz and Akiko Iwasaki**, have been leaders in investigating mRNA shots’ links to so-called “Long Covid.”

Krumholz and Iwasaki believe the disorder should be renamed “Long Vax.”

The study investigates whether individuals experiencing chronic symptoms after Covid vaccination exhibit distinct immunological and antigenic signatures.

The condition is referred to as “post-vaccination syndrome” (PVS).

The authors hypothesize that persistent antigenemia, immune dysregulation, and viral reactivation (e.g., Epstein-Barr Virus) contribute to PVS pathophysiology.

Journalist Alex Berenson, who has been reporting on the research for some time, [commented](#) that the study has exposed the link between Covid mRNA “vaccines” and VAIDS.

Meanwhile, the U.S. Food and Drug Administration (FDA) recently made the [explosive admission](#) that Covid mRNA “vaccines” are spiked with contaminants that triggered a global surge in cancers.

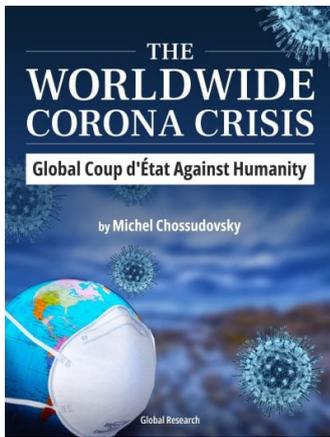

The federal agency made the admission after an FDA study confirmed that Pfizer’s Covid mRNA “vaccine” contains dangerous levels of excess DNA contamination.

## **The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity**

**by Michel Chossudovsky**

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

*“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”*

### **Reviews**

*This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —**Dr. Mike Yeadon***

*In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky’s book is a rock upon which to sustain our fight. —**Dr. Emanuel Garcia***

*In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test - which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists. —**Peter Koenig***

*Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. —**David Skripac***

*A reading of Chossudovsky’s book provides a comprehensive lesson in how there is a global coup d’état under way called “The Great Reset” that if not resisted and defeated by freedom*

loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it's too late. You will not find so much valuable information and analysis in one place. -**Edward Curtin**

**ISBN:** 978-0-9879389-3-0, **Year:** 2022, PDF Ebook, **Pages:** 164, 15 Chapters
